

Package and Class Structure:

- chess — root package containing application bootstrap classes.
 - ChessApp — main entry class (main). It initializes core objects, creates the UI, and starts the game loop.
- chess.core — domain and game logic layer (independent from UI technology).
 - GameController — central coordinator of gameplay.
 - Board — 8x8 board model that stores squares.
 - Square — single board cell with coordinates, color, and optional piece.
 - Player — player model (color + owned pieces).
 - Move — immutable representation of one move (from, to, moved piece, captured piece).
 - Piece (abstract) — base class for chess pieces.
 - King, Queen, Rook, Bishop, Knight, Pawn — concrete piece with movement rules.
 - Enums:
 - Color (WHITE, BLACK)
 - GameState (ACTIVE, WHITE_WON, BLACK_WON, DRAW)
- chess.ui — visual presentation and input handling.
 - GameUI — renders board, reads moves from user input, shows messages/results.
